1. Introduction

The Viper S is the perfect addition to the established Viper series.

The fog output of the machine is amazing, although the machine has „only” 650 Watt.
Coincidental, the Viper S features a low current consumption and also little fluid consumption. Thus, the cost of operation is low and the machine is energy-saving.

Due to the handy dimensions and the low weight the machine can be transported very easy and can be used nearly everywhere.
2. Safety instructions

A fog machine is not a toy!

- Very hot steam escapes from the nozzle. Danger of getting burnt.
- Occasionally very hot droplets of fluid may escape when in operation. Thus never aim at persons directly and keep a minimum distance of 3 m (9.8 ft) to the nozzle.
- Never touch the nozzle when in operation. Danger of getting burnt.
- The location for the machine must be non-flammable, non-combustible and not sensitive to heat. It has to be twice as big as the machine.
- Keep a minimum distance of 60 cm (1.9 ft) to all flammable, combustible objects and objects sensitive to heat.
- Glycol is alcohol and burns with a slightly bluish, almost invisible flame. Never point the fog at strong sources of ignition like fire or pyrotechnic effects.
- Never open the machine and leave the machine unattended when connected to a power supply.
- The visibility has to be more than 2 m (6.5 ft) in rooms where people walk around.
- Do not swallow the fog fluid. Keep it away from children. In case of eye contact, rinse with a lot of water. Consult a doctor should you have accidentally swallowed some fluid.
- Spilled fluid or splashed fluid droplets can cause slip hazard. Mop up the fluid and dispose of it according to regulations.
- Fog may activate smoke detectors.

Artificially-made fog can be produced in many different ways. The method used here to produce fog, with a device which works according to the vaporizer principle, is the most harmless one.

No case has so far been reported in which a sound human being has been harmed because of using our device to produce artificial fog. However, this can only be guaranteed if the professional fog generators are used accordingly, i.e. at the correct vaporization temperatures as well as with the correctly mixed fog fluid.

We, however, recommend: People with health problems or problems of the respiratory tract or with an inclination for allergies should avoid any contact with artificially-made fog.
3. Description of the parts

Front view

1: · Nozzle

Rear view

2: · Control panel for adjusting the DMX start address and the output
3: · XLR socket for 0-10 V (+) DC
4: · DMX in/out
5: · Brass collar for fluid tube
3. Description of the parts

Tank lid

6: · Brass coupling
7: · Brass collar
8: · Tank lid
9: · Check valve
10: · Fluid filter
4. Fluid

4.1 General Notes

The Viper S has been designed to be used with Look fog fluids.

The following Look fog fluids are available:

- Quick-Fog: thick, quick disappearing fog fluid
- Regular-Fog: thick, long lasting fog fluid
- Slow-Fog: thick, extremely long lasting fog fluid

If fluids have been used other than Look fog fluids we can’t grant warranty on parts that have been in contact with the fluid.

PLEASE NOTE: The vaporizer of our machines does not have to be cleaned! Cleaners, available on the market, can damage the vaporizer! We cannot grant warranty in this case.

4.2 Filling the fluid container

- Disconnect the fluid tube from the lid by retracting the brass collar [7] and removing the coupling [6].
- Remove the container from the tank housing of the Viper S.
- Unscrew the lid [8] of the empty container, fill the container with fluid and screw the lid back on.
- Place the full container into the tank housing.

5. Operating the Viper S

5.1 Selecting the location

The location in which the Viper S is to be operated must
- be dry,
- be free from dusty or polluted air,
- be free from vibrations,
- be an non-flammable place or surface,
- be well-ventilated with fog-free air keeping the ambient operating temperature between 5° C and 45° C and the relative air humidity below 80%.
5. Operating the Viper S

The Viper S is a powerful fog generator, producing every desired effect from a tiny puff of smoke to the thickest fog. Digital technology makes fine adjustments of the pump possible. In steps of 1% the output can be adjusted from 1-99%.

5.2 Putting into operation

a. Connect to the mains supply. Make sure the correct voltage is selected (230 V/50 Hz). A „P“ and two figures appear on the display.

```
P  2  5
```

b. After a warm up time of approx. seven minutes the Viper S is ready to start. The green Ready-Led [20] blinks if the working temperature is reached. As soon as the final temperature is reached, the LED illuminates permanently.

c. Adjust the required output via the control panel and press the Enter-button [16] once to start the fogging process (see point 5.4). Press the Enter-button again to stop the fogging process.

5.3 Switching the device off

You can also switch off the machine within these 15 seconds by pressing the Enter-button [16].

```
   0
```

b. When you switch off the DMX signal, the machine will be switched off automatically after 15 seconds.
5. Operating the Viper S

Control panel (Standard-Menu)

14: Mode-button
15: Up/Down-buttons
16: Enter-button
17: DMX-LED, yellow
18: LED display
19: Timer-LED, red
20: Ready-LED, green

Fig. 1:
Display shown at adjusting the pump output

Fig. 2:
Display shown at adjusting the DMX start address

Fig. 3:
Display shown at switching off the device
5. Operating the Viper S

5.4 control choices

Please note: You can’t use the Mode-button for scrolling through the Menu. The Mode-button has to be pressed momentarily. If the Mode-button is pressed and hold more than two seconds, the machine will change into the Timer-Mode (see point 5.5).

You may control the Viper S externally through the XLR sockets [3 and 4].

Please note: DMX takes priority. That means: when the machine is controlled via DMX 512 this data takes priority over 0-10 V (+) DC and Stand alone operation.

5.4.1 Operating via DMX 512

Connecting the Viper S to a DMX-desk using the 5pin XLR socket [4] on the back of the machine. As soon as the machine receives a correct DMX signal, the yellow DMX-LED [17] shines.

5.4.1.1 Adjusting the DMX start address

a) Press the Mode-button [14] at the control panel, until three figures will appear on the LED display [18].
b) Adjust the requested start address by pressing the Up/Down-buttons [15].
c) Save the start address by pressing the Enter-button [16] once. The start address will also be saved when you disconnect the machine from the mains supply.

5.4.2 0 - 10 Volt (+) DC control

Connect the Viper S to an analog desk or with the cable remote (available as an optional extra), using the 3pin XLR socket [3] at the back of the machine.

a) Connect the cable from the desk or the cable remote into the XLR socket at the back of the machine [3].
b) Put the pump up to 99% by pressing the Up-button.
c) The knob on the cable remote or the fader on the analog desk will control the level of the pump.
d) Pressing the On/Off switch at the cable remote starts the fog process, the green On-LED [18] illuminates.
5. Operating the Viper S

5.4.3 Stand alone

The Viper S can be used in the Stand alone mode. In this mode the control of the pump must be adjusted at the machine.

a) Press and release the Mode-button [14] until a „P“ and two figures appear on the display [18].
b) Adjust the pump output with the Up/Down-buttons [15] and press the Enter-button [16] once to start the fogging process.
   The machine now produces fog until the Enter-button is pressed again.
   The output can be changed during the fogging process.

5.4.4 Control via Radio remote

A radio remote is available as an option. It will be delivered with a 3pin XLR plug.

Connect the receiver of the radio remote to the machine, using the 3pin XLR socket [3] on the back of the machine.
   Adjust the requested pump output at the machine (see point 5.4.3).
   Press and hold the first button at the transmitter of the radio remote as long as you want fog to be produced (see manual „Radio remote“).

Control panel Timer-Menu (the red Timer-LED [19] shines)

Adjusting of the output/pump in steps of 1% (1-99%)

Adjusting of the wait time in minutes (0.1-99)
5. Operating the Viper S

5.5 Operating the internal timer

With the internal timer the „fog time“ and “wait time” as well as the output can be adjusted.

To start the Timer-Mode, press and hold the Mode-button [14] for more than 2 seconds. The red Timer-LED [19] shines as soon as the machine has switched to the Timer-Mode. As long as the timer is in operation, the red Timer-LED blinks.

The adjusting of the output, fog time or wait time is the same as in the Standard-Menue. That means you have to press the Mode-button until you reach the required function.

With the Up/Down-buttons you can adjust the output (P.xx), fog time (F.xx) and wait time (P.xx), then press the Enter-button to start the timer.

The timer cycle starts with the time last shown on the display (i. e. P.xx = Starts with wait time, F.xx = Starts with fog time).

You can switch back to the Standard-Menue by pressing the Mode-button [14] for more than 2 seconds or by switching to „ESC“ (Escape) in the Timer-Mode and then press the Enter-button.

5.5.1 Auto start

If the timer is in operation and you disconnect the machine from the mains cable, the Viper S will re-start in the Timer-Mode as soon as it’s reconnected to the mains. To stop this press and hold the Mode-button [14] for more than 2 seconds or switch to „ESC“ in the Timer-Mode and then press the Enter-button.
5. Operating the Viper S

5.6 Wiring of the connectors

5pin XLR (DMX):
Pin 1 = Ground, Pin 2 = DMX –, Pin 3 = DMX +

3pin XLR (analog):
Pin 1 = Ground, Pin 2 = 0-10 V + DC in, Pin 3 = 12 V + DC out, max. 50 mA
6. Cleaning, Care and Maintenance

– Ensure the air vents are not clogged by dust. If necessary remove the dust.

– Take care that the machine can not get overheated.

– Do not run the Viper S without any fluid, as the pump will run dry.

– Wipe up spilled Fluid immediately. Moisture – also fluid – can destroy the electric parts of the machine.

– Check the state of the air valve filter from time to time and clean or replace it when necessary. Always replace the whole fluid canister rather than pouring new fluid into the old tank. This reduces the changes of the machine clogging up.

– If you install the Viper S make 100% sure that a permanent fog-free air supply for the unit is guaranteed. Cooling air with too high fog concentration (very often in Clubs and Discos) can condense inside the machine and cause moisture damage.

– For cleaning the surface of the device use a suitable, solvent-free cleaner.

– **PLEASE NOTE**: The vaporizer of our machines does not have to be cleaned! Cleaners, available on the market, can damage the vaporizer! We cannot grant warranty in this case.
7. Troubleshooting

The fog machine does not fog

- Check external control signals
- Check mains supply
- Check fluid tank (empty?)
- Check for correct connections at the fluid bottle
- Check for fluid in the fluid tube
- Check if fluid filter is clogged
- Check that pump setting on the machine is >1

The fog machine fogs uncontrollably

- Check mains supply
- Check unit for moisture (moisture inside the machine, especially on the PCB can cause fogging)

The fog machine switches off suddenly

- The „Temperature cutout” has switched off due to overheating. Remove external heat source (for instance projector shining right onto the housing) and/or make sure sufficient fresh air supply. After 15 to 30 minutes the unit should switch back to „on” again.

Loud droning sound during fogging

- The pump is running dry. Avoid this absolutely!
- Refill (or better: replace) fluid bottle
- Double check connection fluid tube and fluid bottle.

E-4 appears on the LED display

- The machine is getting too hot. The heating switches off and the machine cools down.
  Solution: Disconnect the machine from the main supply for a moment and then re-connect it.

E-1 appears on the LED display

- Please send the machine to the service-station or your local dealer.
### 8. Specifications

**Procedure:** vaporizing fog generator  
**Power requirement:** 650 Watt  
**Voltage:** 230 V/ 50 Hz or 120 V/ 60 Hz  
**Warm up time:** approx. 7 min.  
**Fluid consumption:**  
- 60 ml (2.0 oz)/min at max. output  
- 15 ml (0.5 oz)/min at continuous output  
**Fluid tank capacity:** 750 ml (25.3 oz)  
**Fog output:** adjustable in 99 steps, steps à 1%  
**Output projection:** max. 8 m (26.2 ft)  
**Fogging time:**  
- at 100% output: approx. 22 sec.  
- at < 25% output: continuous output  
**Control:**  
- DMX 512  
- 0 - 10 V analogue  
- Timer  
- Stand alone mode  
- Radio remote (option)  
- XLR-remote (option)  
**Temperature control:** Microprocessor controlled  
**Overheating protection:**  
- Heater block with thermostat  
- Pumpe with temperature switch  
**Dimensions (L x W x H):** 35 x 18 x 19 cm (13.7 x 7 x 7.5 in)  
**Weight without tank:** 5.4 kg (11.9 lb)  

Manufactured for:  
**Look Solutions** - Fog machines made in Germany · Bünteweg 33 · DE - 30989 Gehrden
For the fog machine **Viper S** Look’ guarantee is:

1. Free of charge, subject to the following conditions (No. 2 - 6) we will repair any defect or fault in the unit if it is caused by a proven factory fault and has been advised immediately after appearance and within 24 months of delivery to the end user. Insignificant deviations of the regular production quality does not guarantee replacement rights, nor do faults or defects caused by water, wrong fog fluid, by generally abnormal environment conditions or Force Majeure.

2. Guarantee Service will be done in the following way: Faulty parts will be repaired or replaced (our choice) with correct parts. Faulty units have to be brought to us or our service centres or to be sent to us or our service centres at customer’s expense. The invoice and/or receipt showing the purchase date and the serial number has to come with the faulty unit, otherwise this will not be guarantee service. Replaced parts become our property.

3. The customer loses all rights for guarantee services, if any repairs or adjustments are done to the units by unauthorized persons and/or if spare parts are used which are not approved by us. The right of guarantee service is also lost if fluids other than original Look fog fluids have been used or if units are sent to us with full fluid bottles. Also non compliance with the instructions in this manual or mistakes by incorrect handling/treating of the machine will lead to a loss of guarantee and also any faults and damages caused by undue force.

4. Certain parts of the machine are „consumable parts“ and are not covered by the warranty.

5. Guarantee services do not cause an extension of the guarantee time or the start of a new guarantee time. The warranty for replaced parts ends with the guarantee time of the whole unit.

6. If a defect/fault can not be repaired by us in a satisfactory time, we will, within 6 months after sale of the unit, on choice of the customer, either:
   - replace the whole unit for free or
   - refund the lesser value or
   - take back the whole unit and refund the purchase price, but not more than the usual market price at the time of the refund.

7. Further claims, especially for damages, losses etc. outside the unit are excluded.

Other guarantee regulations may be valid outside Germany. Please check with your dealer!

If you should send the unit for service, do not forget to remove any liquid from the fluid bottle.
