IMPORTANT ETCNOMAD ORDERING INFORMATION

To increase the capacity of a ETCnomad Puck system with fewer than 2048 outputs, order additional 512 output upgrades. ETCnomad Puck 256 can be upgraded to ETCnomad Puck 512 with a separate part number.

A single universe of output may be distributed using an ETC Gadget USB to DMX/RDM converter. Additional or all outputs may be distributed via Ethernet protocols directly (Net3™/ACN/sACN, or ArtNet) or by compatible Ethernet-distribution hardware, such as Net3 DMX/RDM Gateways. The Gadget and network equipment must be purchased separately from the ETCnomad Puck kit.

NOTE: The ETCnomad Puck controller does not support ETCNet2™/EDMX protocol.

GENERAL INFORMATION

The ETCnomad Puck is a full-featured mini-computer with an embedded ETCnomad dongle capable of running Eos, Element™ and Cobalt applications. It provides lighting control with conventional and moving lights, media servers and LED luminaires. The ETCnomad Puck can be used with either Eos or Cobalt operating systems in primary, backup, client and offline environments. When connected as a client, ETCnomad accesses the full output capacity of the connected system.

Optional fader wings, programming wings, X-keys and compatibility with USB–MIDI panels allow extended and customisable control.
